

MaestroVision becomes a Milestone Solution Partner

MaestroVision's VERAD integrates with Milestone XProtect® VMS for optimal video evidence retrieval

FLORIDA - February 22, 2016. MaestroVision, a leading provider of advanced video solutions, today announced the release of VERAD, Video Evidence Retrieval Archive and Distribution System, for Milestone XProtect® Software Suite.

VERAD is a comprehensive solution that compiles and manages all media content from Milestone Video Management Software and retrieves relevant video clips creating key video evidence.

At the core of VERAD is an application linking all available Milestone video data from surveillance camera systems allowing access, import and conversion of all recorded video without the loss of any associated metatags. By obtaining location, time and event-triggered information, the solution will automatically retrieve key video and place it on a video timeline. The created camera sequence follows the suspect from one camera to another simultaneously.

The applications and advantages of this technology are endless; agencies can follow suspects in public places, evaluate felons during interrogation, monitor activities of the incarcerated and record suspect behavior during alcohol or drug testing. Retailers can use the system to identify potential shoplifters or employee pilfering, casinos can scrutinize players suspected of cheating, and municipalities can monitor activities at public events.

"This technology is a great opportunity for law enforcement agencies, retailers and government bodies to increase the efficiency of video evidence and successfully conclude investigations, whilst drastically reducing the time and resources invested," said Claude Turcotte, President and CEO of MaestroVision.
